

Hill Top Energy Center

Greene County, Pennsylvania

B&W Energy Services is excited to announce the completion of the Hill Top Energy Center. Located in Carmichaels, Pa., the Hill Top Energy Center is a 620MW combined-cycle power project utilizing a GE 7HA.02 gas turbine paired with an HRSG and hybrid steam turbine. The plant is situated on over 40 acres of land originally used for coal mining operations. The EPC contractor, Kiewit Power Constructors, selected B&W for specialized pre-commissioning services based on our proven track record of executing large power projects. B&W provided turn-key chemical cleaning, air blowing and AquaLazing services for the project and also supported lube oil flush and steam blow activities onsite.
