

Tampa Electric Big Bend Modernization Project

Tampa, Florida

B&W Energy Services is proud to announce the completion of pre-commissioning services at the Tampa Electric Big Bend Modernization Project near Tampa, Florida. The overall project scope involves converting an existing coal-fired unit to a natural gas fired combined-cycle unit. Once operational, the plant will produce 1,090 MW of electricity while significantly decreasing carbon emissions from the facility.

Tampa Electric Company and TIC/Kiewit engaged B&W to perform chemical cleaning of two large Heat Recovery Steam Generators (HRSGs) and AquaLazing of piping systems in support of the Modernization Project. B&W is excited to work directly with the Owner as well as long standing client TIC/ Kiewit to execute critical services on such a unique project.
